Make a Bird's Nest

1. Try to spot a bird's nest in your backyard or on a hike.
2. Make observations about the type of nest you saw...
 - What was it made of?
 - How does it stay together and not fall apart?
 - What do you imagine the texture of it to be like?
 - What types of birds would be in it, big or small?
3. After observing, make your own bird nest on the ground mimicking the one you found in the tree. Be sure to use only dead, down and detached (DDD) materials from nature! Option to make your nest big enough for you to fit and act like your favorite bird!
